

EC Regulation Nr. 1907/2006

We would hereby like to inform you that as of 27th June 2018, lead has been classified as a SVHC substance (Substance of Very High Concern) in accordance with REACH regulations.

This is a result of EC regulation no. 1907/2006 (REACH article 59 1 10) and the revision of the Candidate List from which substances, that are of particularly high concern, are selected for authorisation.

As such, we would like to make you aware that lead-acid batteries, as supplied by Banner contain the substance lead (CAS 7439-92-1, EC 231-100-4) at a concentration of more than 0.1% by mass. For more information, please refer to our homepage at www.bannerbatteries.com
