VEHICLES**

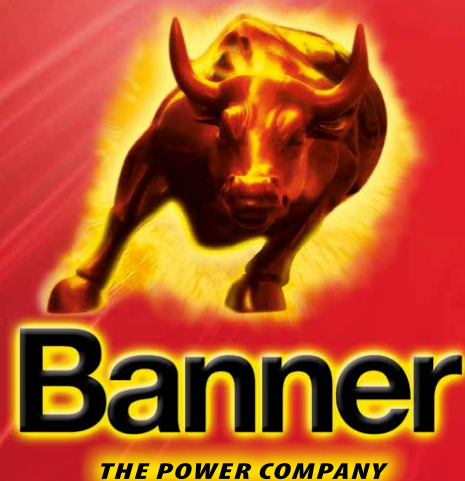

STARTER BATTERIES

EFB 690 17
Enhanced Flooded Battery

EFB 740 17
Enhanced Flooded Battery

The starter and onboard battery family for commercial vehicles.

Such as trucks, buses, agricultural/forestry/construction machinery, and even snow groomers.

Buffalo Bull Family

Buffalo Bull EFB	The electrical system in the CV battery segment must fulfill a growing number of special requirements, e.g. comfort function in long-distance trucks and battery integration at the rear of the truck. To meet these needs Banner has launched the new top seller product, Buffalo Bull EFB.
Buffalo Bull High Current	Special vehicles require ever-higher cold start current. This is due to the high lag loads (e.g. in electrical and hydraulic units), which have to be dealt with during starting. Municipal vehicles (e.g. sweepers, high-pressure rinsing carts) and snow groomers.
Buffalo Bull SHD	Rugged, constant use in commercial vehicles (CV) puts batteries to the severest test, in addition to cycle and vibration resistance. The optimised SHD battery constitutes the perfect response.
Buffalo Bull SHD PRO	The problem-solving battery for hard cases show its strong power in tough situations, such as stop & go and cold starts, when other batteries have long given up the ghost.

Starter Batteries

Type (DIN)	690 17	740 17
Capacity (K20)	190 Ah	190 Ah
Cold cranking current (EN)	1.050 A	1.200 A
Layout	3	3
Terminal type	1	1

* Typical fitment includes: Volvo, Scania, MAN and many others

* Please check online catalogue for correct application before fitment.
